

Marine Deco CEM

Decorative concrete coating for multiple surfaces

marlon-marine.com

A solid solution

Marine Deco CEM

Marine Deco CEM is an innovative product developed and produced in Denmark.

Deco CEM is a performance coating in the same category as microcement, silk cement and polymer-cement mortar, but in the strongest quality on the market, as the base consists of high-performance concrete. As one of the only products on the market, our product offers phenomenal flexibility, simplicity, and durability.

Deco CEM provides a raw concrete surface. The consistency is determined by the amount of water and therefore the same product can be used on floors, walls, showers, bathrooms, the stairs in the entrance, furniture and much more.

Deco CEM can be used indoors, outdoors and in wet rooms. The mixture requires only water, and it can therefore easily be used for larger surfaces, more square meters and can create completely specific surface expressions.

Deco CEM is produced in Denmark and offers a range of possibilities. Incorporate your personal logo, create textures, or give the surface a special pattern. You set the limits.

Deco CEM comes in four standard colours. For larger quantities, it is possible to produce special colours on request.

We are not microcement

As the only product on the market, Deco CEM is based on high-performance concrete and outperforms traditional coating products. Our vision is to offer you a high-quality product, the most user-friendly and the strongest coating on the market. We never compromise.

With Deco CEM you will get a simple solution for projects big and small. In cooperation with us, it is possible to make your own designs in the colours, texture, and finish you choose.

Let us provide inspiration for your next project.

Certification

Deco CEM from Marlon Marine has been tested according to IMO 2010 FTP Code and certified as primary deck covering by DNV and USCG.

Deco CEM is both material-saving and cost-reducing compared to solutions in cast or solid high-performance concrete. At the same time, Marlon deco CEM is a more flexible material with many application options and solutions, which makes it ideal for your next project.

Just add water

With Deco CEM, it is possible to create a concrete surface on both new and existing surfaces in the absolute highest quality and achieve an attractive, timeless look with concrete for your next project. Deco CEM is simple to use, as there are few work steps – just add water to the product. In addition, Deco CEM can be applied to almost any surface.

The slightly rough expression of the concrete surfaces is easily softened with e.g. rugs and furniture in softer natural materials, and concrete provides a nice contrast to wood in particular. Concrete surfaces are very practical, as they are easy to clean and maintain.

Additional colors

With Deco CEM colour additive, you can create your completely personal and unique colour.

By adding 2% colour additive, you can create a wide range of colours, based on the four standard colours: Nightfall, Drizzly, Illume and Alba.

Colour additive can be delivered as a supplement to our four standard colours, delivered in pre-weighed bags containing exactly 100 g, which fits a 5-kg bucket. This ensures that the colour remains the same even when mixing several buckets.

Colour cards with the different colours are available on request.

You are of course free to experiment with Deco CEM to create your own personal colour by mixing several colour additives. Only your imagination sets the limits.

ALBA

ILLUME

DRIZZLY

NIGHTFALL

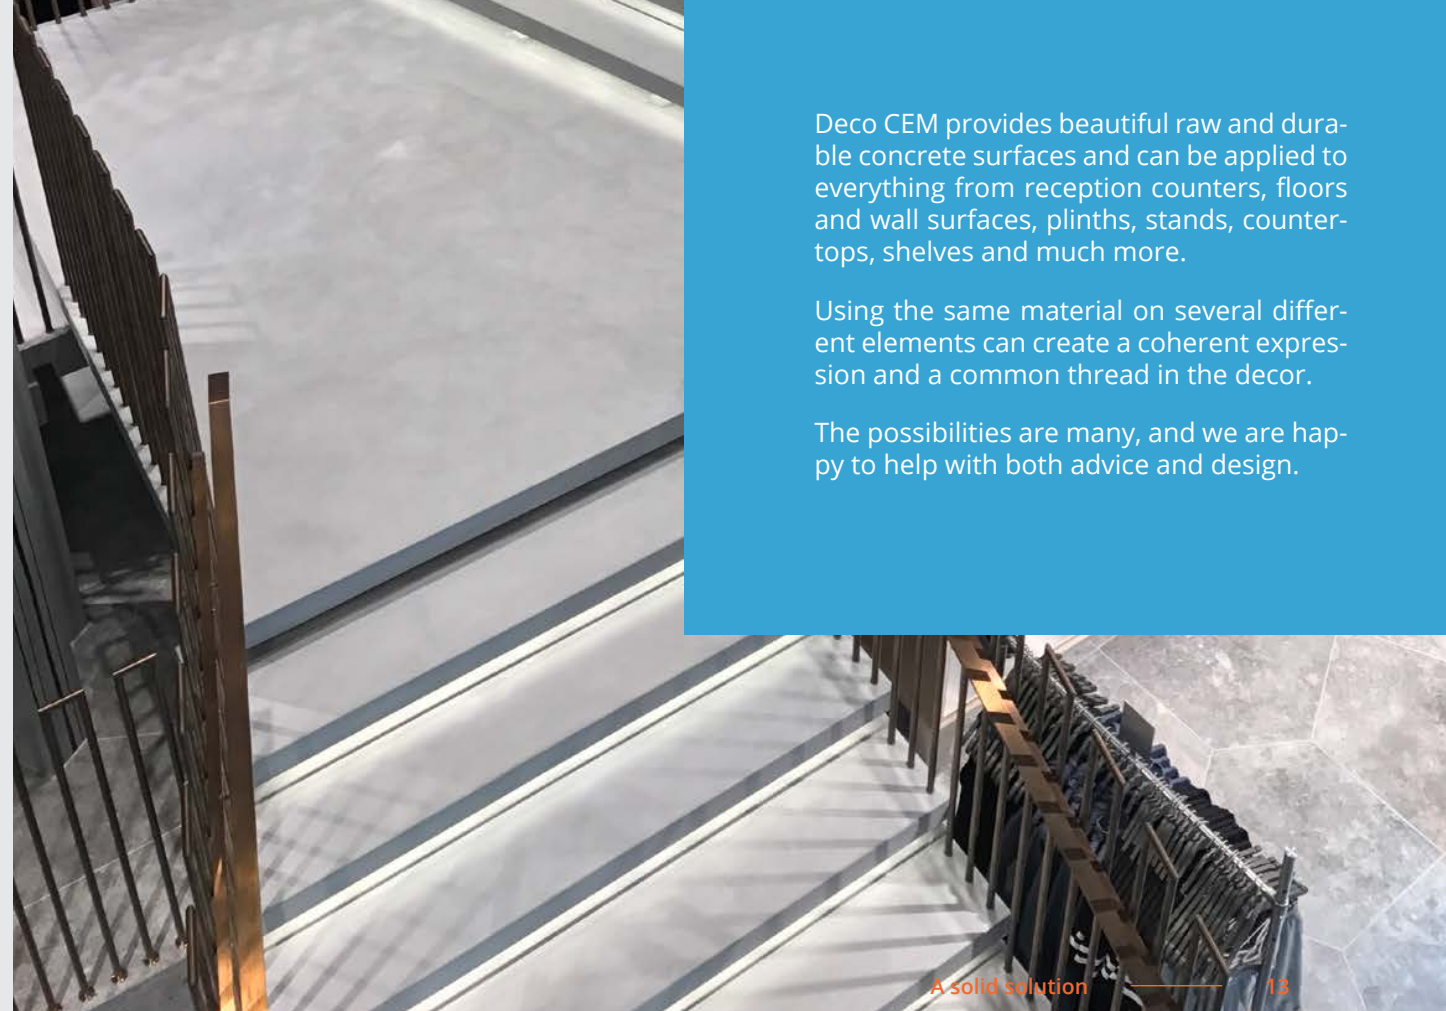

Enjoy a shower with Deco CEM

Deco CEM is available with a sealer developed especially for wet rooms. In bathrooms and wet areas, it is important to always seal your surfaces as wet rooms. If you have an existing surface that is already sealed, just start with Deco CEM. In the case of new construction, the surfaces in wet rooms must be sealed before Deco CEM is used. From there, it is easy – you get everything you need in the way of products and expertise from us.

It has become very popular to make one or more surfaces in the bathroom a concrete surface, to create a raw, urban look.

Deco CEM provides beautiful raw and durable concrete surfaces and can be applied to everything from reception counters, floors and wall surfaces, plinths, stands, countertops, shelves and much more.

Using the same material on several different elements can create a coherent expression and a common thread in the decor.

The possibilities are many, and we are happy to help with both advice and design.

Let us become a fixture

First impressions are important, so why not make the best possible impression with your project? Deco CEM is a popular and obvious solution for creating a modern interior. It's simple to make big changes, whether in the reception, shop, café, showroom, restaurant or anywhere else.

You can influence the expression of the finished result, as the finished look depends on the choices you make in terms of colour and application tool. With Deco CEM, you always get a unique look that can be adapted to your own wishes.

Deco CEM takes the floor

Deco CEM is a very popular choice for floors. Concrete floors are a modern and exclusive solution. This type of flooring fits especially well in the popular New Yorker décor style that revolves around a raw, unpolished, industrial and rustic look.

Deco CEM creates a thin concrete surface on an existing solid surface. It is therefore an ideal solution for renovation projects. Deco CEM fits all budgets, as you do not have to tear down, throw out and buy new. You can easily reuse what you have. At the same time, you get a durable surface that lasts and is easy to style.

Marlon around the world

As a strong and reliable supplier and partner based in Brødstrup, Denmark, we manufacture our products at a state-of-the-art, high-capacity production facility, which enables us to produce large volumes and deliver our products and services worldwide on very short notice.
